#### ABSTRACT

NOTE

This Kids Count data book examines statewide trends in the well-being of New York's children. The statistical portrait is based on six general areas of children's well being: (1) economic security; (2) physical and emotional health; (3) education; (4) citizenship; (5) family; and (6) community. Following an overview of the goals and objectives of this report, the first section describes each of the following individual indicators: (1) children in poverty; (2) participation in public assistance; (3) low birth weight; (4) infant mortality; (5) prenatal care; (6) asthma hospitalizations; (7) unintentional injury hospitalization; (8) self inflicted injury hospitalization; (9) five leading causes of death; (10) sexually transmitted diseases; (11) adolescent pregnancy; (12) PEP(Pupil Evaluation Program) test scores; (13) limited English proficiency; (14) dropout rate; (15) regents endorsed diploma; (16) college enrollment; (17) arrests; (18) assaults; (19) drug arrests; (20) driving while intoxicated; (21) persons in need of supervision; (22) parental presence; (23) child abuse; (24) repeated child abuse; (25) foster care; (26) unemployment; (27) births to women without insurance; (28) violent and property crime; and (29) firearm crime. The second section of the report provides county maps as well as profiles of New York state, New York City, the state without New York City, five New York City boroughs, and the state's counties. The report concludes with a section of Technical Notes. An addendum provides updated data where available for indicators contained in the Data Book. (SD)

Chairperson

Executive Director

## MISSION STATEMENT

that all individuals, and particularly children, in New York State have the opportunity to reach their potential as well as to strengthen the integrity of families. The Council on Children and Families is a State agency within the Executive Department charged with ensuring the coordination of services to children and families in order to achieve the most rational and effective services system possible. The mission of the Council on Children and Families is to ensure The Council, through the commitment of its member agencies, will define and implement a coordinated policy on children and family services ultimately leading to streamlined, cost-efficient systems of services in New York State that are family-focused and responsive to citizens' concerns. Further, the Council, in all its work, will recognize the value of coordinating efforts with local governments and the private sector to achieve its goals.

## COUNCIL MEMBERS

Barbara A. DeBuono, M.D., Commissioner Department of Health

Commission on Quality of Care for the Mentally Disabled Gary D. O'Brien, Chairperson

> Walter G. Hoefer, Director State Office for the Aging

Division of Probation and Correctional Alternatives George L. Sanchez, Director

> Office of Children and Family Services John A. Johnson, Commissioner

Office of Alcoholism and Substance Abuse Services Jean Somers Miller, Commissioner

> Division of Criminal Justice Services Katherine N. Lapp, Commissioner

James L. Stone, Commissioner Office of Mental Health

Thomas A. Maul, Commissioner

Advocate's Office for Persons with Disabilities Richard Warrender, State Advocate

## ACINOWLEDEMENTS

The New York State Touchstones/Kids Count 1998 Data Book would not have been possible without the help of many individuals and organizations. We are very grateful for the time, talent and support of each one.

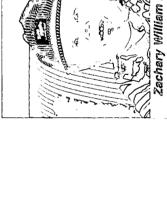

All 13 of the Council on Children and Families member agencies were involved in the development of the goals, objectives and outcome measures for Touchstones. Their hard work has resulted in a framework designed to focus all of us on improving outcomes for New York State's children and families.

Special thanks to Pam Sheehan from the Department of Health for her attention to the task of collecting and reviewing data from the numerous State agencies involved in the project and to Marjory Simmons from the Department of Health's Public Affairs Group for her guidance in addressing production issues. Also, the production of this book would not have been possible without the dedication and assistance of staff from the Council on Children and Families.

In particular, thanks to Frank Bogardus and Dan Crawley for their technology skills; Bob Frawley, Ford McLain and Fred Meservey for their hours of reviewing and editing the book; Pat Wood for assisting with word processing and responding to the multitude of Kids Count phone calls received on a daily basis; Robin Miller for early layout and design assistance and for coming back from maternity leave to help finish the book; and Karen Chavis and Chris Cargain for assisting with a variety of tasks.

Thanks also to Lisa Natalie, our layout and design artist, for her commitment and patience through numerous edits, changes and delays and for not giving birth to her first child until the book was nearly completed.

Finally, the New York State Touchstones/Kids Count project wishes to thank the Annie E. Casey Foundation for its financial support and the commitment of its program officers to the Kids Count network.

Zachary William Miller October 27, 1997

Daniel Matthew Crawley January 29, 1998 These three children were born to our staff during the production of this publication. New York State now has three more kids that count!

## EXECUTIVE DIRECTOR WESSAGE FROM THE

### ALAINA M. SWEENY

New York State loves its children. Our goal is that the children of the Empire State will be prepared physically, emotionally, academically, socially and economically for adulthood and the labor market. We know that investing in the next generation is our best investment for the future of our great State.

There is a role for every level of government, and for schools, business, and community members alike, in insuring both our success and the success of our children. We must look to the opportunities and assets within our communities and maximize our positive impact on our children.

Governor Pataki has made strengthening economic opportunities for all New Yorkers a primary focus of his administration. The development of our future leaders and workforce -- today's youth -- is a central component of his agenda. To ensure the economic security of childen, the Office of Child Support Enforcement vigorously enforced new mandates to ensure that non-custodial parents are financially supporting their children.

We know that a healthy start is essential to future school success. Through the expansion of Child Health Plus, New York's nationally recognized model for children's health insurance, the State is helping to ensure access to health care for every child in New York through the age of 18.

To help prepare young children for entering school ready to learn, New York has developed a universal pre-kindergarten program that will serve more than 200,000 four-year-olds throughout the State. Through the flexibility offered by the Child Care Block Grant, families are able to maintain continuity in their child care arrangements. By utilizing these opportunities and building upon existing community resources such as Head Start, unprecedented opportunities have been made available for localities to design systems which provide the early stimulation critical to school success.

New York State is committed to educational excellence. Under the leadership of the Governor, New York has moved forward with initiatives designed to reduce class size, provide new textbooks, ensure that all children have access to educational technology, and provide opportunities for improving children's reading and writing skills, including those with limited English skills.

Our children deserve safe streets and strong families. Under Governor Pataki's leadership, New York will continue its efforts to protect children by improving child protection and domestic violence services. In addition, the Governor has acted to cut the crime rate in the State and will continue these efforts so that all children and families can feel safe in the communities in which they live, work and go to school.

We must endeavor to meet the Touchstones' goals and outcomes for a better future for our children and families, and we must constantly evaluate our progress toward meeting those goals. It is our hope that all New Yorkers will help with the effort.

### FOREWORD

Welcome to the 1998 edition of the New York State
Touchstones/Kids Count Data Book. The Council on Children and
Families and its 13 member agencies have produced this book to
provide a snapshot of the status of New York State's children and
youth. It is hoped that this publication will serve as a valuable
resource for state and local planners, policy makers, civic and religious leaders, service providers, advocates and other organizations as
well as citizens concerned about the well-being of children and families.

The commissioners and directors of the health and human services agencies, under the direction of Governor Pataki, recognized that to improve outcomes in each of the areas for which they had responsibility, it was necessary to shift to a new paradigm characterized by prevention, early intervention and youth/family involvement. Further, to increase the effectiveness of the various systems, the agencies embarked on an effort to develop a common set of measurable goals and objectives that lead to improved outcomes for children and families. From these actions came New York State Touchstones.

A single vision underlies this effort - that children, youth and families will be healthy, and have the knowledge, skills and resources to succeed in a dynamic society. Touchstones is a set of common goals, objectives and outcome measures that will guide the State's health, education and human services agencies in setting both interagency and single agency agendas. The framework will help state and local policy makers gauge whether current services make a difference in the outcomes for children and youth. Touchstones will also help state and local officials and service providers revamp service delivery mechanisms to align them more congruently with State priorities and make them more effective in responding to children and family

This common set of goals and objectives cuts across all service sectors and allows individuals and organizations with diverse missions to come together to improve conditions for children and families. Touchstones represents expectations about the future, and provides a focus for developing cooperative strategies to reach desired results. The goals and objectives are integrally related to each other and call for comprehensive strategies to address any single aspect of child and family well-being.

New York State is fortunate to be part of the national Kids Count network, funded by the Annie E. Casey Foundation to foster a greater commitment to improving life outcomes for children and their families. The Council recognized the important link between Touchstones and Kids Count, and saw Kids Count as the vehicle for highlighting the status of New York's children and families and disseminating this information statewide to a broad range of individuals and organizations. This data book presents the Touchstones' goals and objectives, provides statewide measures on the state of children and families in New York, and profiles each county on the same set of measures.

The Touchstones goals, objectives and outcome measures will continually be reassessed and refined to give New York State a more effective system for measuring the status of children and families and for charting progress toward improving their well-being. The 1998 New York State Touchstones/Kids Count Data Book will help all of us focus on a better future for our children and families.

## JUNTRODUCTION

tors that will help guide the State's health, education and human services agencies in setting both interagency and single agency agendas. Children and Families have established a set of goals and objectives Council has also adopted a set of core outcome measures or indicaoutcomes for children and families is New York State Touchstones. This common set of goals, objectives, and measures for improving Families and Communities. To measure results in these areas, the for children, youth and families in six major life areas: Economic The 13 member agencies of the New York State Council on Security, Physical and Emotional Health, Education, Citizenship,

that not all the Touchstones measures were used in an effort to keep presents the Touchstones goals and objectives with measures regardtargets; however, the data presented in this book are large enough to The New York State Touchstones/Kids Count 1998 Data Book through the New York State Department of Health's Maternal, Child book are presented by major life areas rather than by specific objecthe book at a manageable size. Therefore, the book contains about Educational Status of the State's Schools pursuant to Chapter 655 of the tives. This was done, in part, because some indicators may be assoguide policy development and program design. It should be noted provides a complete list of the Touchstones measures. The indicaing the status of children and families. The indicators in this data The Touchstones measures do not stipulate specific performance have an indicator currently available because of insufficient data. three-quarters of the Touchstones measures. An appendix table ciated with more than one objective and some objectives do not and Adolescent Health Profile and in the New York State Education tors that are not presented in this book are reported routinely Department's A Report to the Governor and the Legislature on the Laws of 1987.

sented by life areas, with information for all counties as well as the There are two main sections in the book. First, data are pre-

each indicator. This section also provides descriptive text outlining State as a whole, New York City and the rest of the State listed for user to obtain a succinct overview of a particular county and draw the definition and significance of the indicator and major findings within New York State. The second section of the book presents the data within individual county profiles. This format allows the comparisons to other counties or the State as a whole. Several criteria were used in selecting the indicators for this data

- the measure had to focus on the characteristics of children, not on the characteristics of programs or services;
- reflect the status or experience of all children and youth, the measure had to be population-based, (i.e., it had to not just those of a particular program);

 $\infty$ 

- the data for the measure had to be available annually for counties; and
- the measure had to be reliable.

duced in 1995. The contents of the 1998 Touchstones/Kids Count Data Book include many of the indicators that appeared in the last book. However, of the 35 indicators presented in the 1998 book, The last Kids Count data book for New York State was pro-14 are new.

### USE OF THE DATA BOOK

local efforts to improve results for children and families. The goals New York State Touchstones is a tool to help guide state and and objectives represent expectations for the future status of chil-

## LINITRODUCTION

dren and families. The data contained in this book can help focus planning and decision-making by providing an overview of the wellbeing of children, youth and families; comparing their current status to that of the past; and describing changes over time. The information is designed for a broad audience, including state and local policy makers, planners, providers, advocates, civic and religious leaders, the business community, the media, parents and youth. By recognizing the interrelationships among the indicators and integrating the indicators into state and local decision-making processes including policy development, program and services planning, training and evaluation, comprehensive strategies for improving the well-being of children and families can be developed. The discussions generated by Touchstones/Kids Count will help in the identification and promotion of opportunities that are necessary for positive youth development and strong, nurturing families in all communities throughout New York State.

## FUTURE OF TOUCHSTONES/KIDS COUNT

The Touchstones framework will be continually reassessed and refined to ensure that it is the best tool available for focusing efforts toward improving outcomes for children and families and charting progress over time. The member agencies of the Council on Children and Families will continue to integrate Touchstones within State operations. In addition, through initiatives such as the Office of Children and Family Services' Integrated County Planning Initiative, the Task Force on School/Community Collaboration, and Partners for Children, State agencies will work in partnership with

communities to link the Touchstones' indicators to local planning processes and efforts to measure progress towards improving outcomes for children and families. At the same time, agencies will also examine ways to improve the collection and dissemination of useful data to counties and communities throughout New York State.

In the near future, the Council will produce a series of special reports based on selected Touchstones/Kids Count indicators.

These reports will include updates on data and information on program area measured by the indicators. In addition, a state-level team has been examining ways to access useful data regarding youth without overburdening schools with multiple survey instruments. This team is reviewing the Youth Risk Behavior Survey funded by the Centers for Disease Control and the statewide youth survey issued by the Office of Alcohol and Substance Abuse Services to determine whether a melding of these surveys is possible to address data needs of the agencies and gaps in data available for Touchstones/Kids Count. The development of a single survey instrument that collects data about youth attitudes, assets and risk behaviors would provide valuable information not currently avail-

This data book documents the status of children and families in New York State. It is hoped that the presentation of these data will encourage all New Yorkers to work together toward achieving the Touchstones' goals and objectives for improving the quality of life for children and families throughout the state.

# NEW YORK STATE TOUCHSTONES

## GOALS AND OBJECTIVES

Economic Security

Children and youth will be raised in families with sufficient economic resources to meet their basic needs. Goal 1:

Children will be raised in households with sufficient economic resources to provide food, clothing, shelter and other necessities. Objective 1:

Children and youth will receive adequate financial support from absent parents. Objective 2:

Youth will be prepared for their eventual economic self-sufficiency. Ö Goal

Youth will have skills, attitudes, and competencies to enter college, the work force, or other meaningful activities. Objective 1:

Young adults who can work will have opportunities for employment. Objective 2:

Youth seeking summer jobs will have employment opportunities. Objective 3:

> Physical and Emotional Health

Children and youth will have optimal physical and emotional health. **Goal 3:** 

Children and youth will be free from preventable disease and injury. Objective 2:

Children and youth will be born healthy.

Objective 1:

Children and youth will have nutritious diets. Objective 3:

Children and youth will be physically fit. Objective 4:

Children and youth will be emotionally healthy. Objective 5:

Children and youth will be free from health risk behaviors (e.g., smoking, drinking, Objective 6:

substance abuse, unsafe sexual activity).

Children and youth will have access to timely and appropriate preventive and primary health care. Objective 7:

Children with special health care needs will experience an optimal quality of life. Objective 8:

Children and youth with service needs due to mental illness, developmental disabilities and/or substance abuse problems will have access to timely and appropriate services. Objective 9:

## GOALS AND OBJECTIVES

Goal 4: Education

Children will leave school prepared to live, learn and work in community as contributing members of society.

Ø

Children will come to school ready to learn. Objective 1:

Students will meet or exceed high standards for academic performance and Objective 2:

demonstrate knowledge and skills required for lifelong learning and self-

sufficiency in a dynamic world.

Students will be educated in a safe, supportive, drug free and nurturing environment. Objective 3:

Students will stay in school until successful completion. Objective 4:

Citizenship

Children and youth will demonstrate good citizenship as law-abiding, contributing members of their families, schools and communities. Goal 5:

(15)

Children and youth will assume personal responsibility for their behavior. Objective 1:

Youth will demonstrate ethical behavior and civic values. Objective 2:

Children and youth will understand and respect people who are different from Objective 3:

hemselves.

Children and youth will participate in family and community activities. Objective 4:

Children and youth will have positive peer interactions. Objective 5:

Children and youth will make constructive use of leisure time. Objective 6:

Youth will delay becoming parents until adulthood. Objective 8:

Children and youth will refrain from violence and other illegal behaviors.

Family

Families will provide children with safe, stable and nurturing environments Goal 6:

Parents/caregivers will provide children with a stable family relationship. Objective 1:

Parents/caregivers will possess and practice adequate child rearing skills. Parents/caregivers will be literate. Objective 2: Objective 3:

30

(J)

#### ERIC Foulded by ERIC

# NEW YORK STATE TOUCHSTONES

## GOALS AND OBJECTIVES

Parents/caregivers will be positively involved in their children's learning. Objective 4:

Parents/caregivers will have the knowledge and ability to access support services for Objective 5:

their children.

Parents/caregivers will provide their children with households free from physical and emotional abuse, neglect and domestic violence. Objective 7: Objective 6:

Parents/caregivers will provide their children with households free from alcohol and other substance abuse.

Commanity

New York State communities will provide children, youth and families with Goal 7:

healthy, safe, and thriving environments.

Objective 1: Communities will be economically sound.

The environment will be free of pollutants (e.g., air and water quality will meet healthful Objective 2:

standards).

Objective 3: Neighborhoods will be crime free. Objective 4: Adequate housing will be available.

Objective 5: Adequate transportation will be available.

New York State communities will provide children, youth and their families Goal 8:

with opportunities to help them meet their needs for physical, social,

moral, and emotional growth.

Communities will make available and accessible formal and informal services (e.g., child Objective 1:

care, parent training, recreation, youth services, libraries, museums, parks).

Adults in the community will provide youth with good role models and opportunities Objective 2:

for positive adult interactions.

Communities will provide opportunities for youth to make positive contributions to Objective 3:

community life and to practice skill development.

### GOAL FF1

- Young adults who can work will have opportunities for amployment. 0
- Youth sacking summer jobs will have employment opportunities. 0

# CHILDREN AND YOUTH IN POVERTY

#### Definition:

Children are considered to be living in poverty if their family income falls below the poverty thresholds set by the Federal Government for families of different sizes. For example, in 1996, the Federal poverty line for a family of 3 was \$12,516 and for a family of four was \$16,036.

#### Significance:

Economic deprivation in childhood has been linked to negative social, health, education, and future employment consequences. The economic status of children and youth is closely related to how they will do in many life areas (e.g., health, education) and in making the successful transition to adulthood. Infants born to poor women are less likely to benefit from adequate prenatal care or a nutritious maternal diet. They are also at risk of prematurity and low birth weight. Infants with low birth weight show relatively high levels of birth defects, mental retardation, and other developmental disabilities. These, in turn, may lead to decreased ability to complete schooling and earn income as an adult.

Growing up in economic deprivation places children at risk of many negative consequences as they grow and develop. For example, children living in poverty are exposed more frequently to such environmental risks as substandard housing, family stress, inadequate social support, and parental depression. In addition, children living in poverty have limited access to quality health care, and such adverse conditions as poor nutrition, lead poisoning, learning disabilities, otitis media, and other infectious conditions are more common among poor children (DOH, Bureau of Child and Adolescent Health, 1995).

## New York State Findings:

- In 1993, there were 1,226,505 children in New York living in families whose incomes fell below the poverty line.
- Poverty rates for children in New York City (43%) were more than two and a half times the rate in the rest of the State (16%). The poverty rates for children living in the Bronx (53%), Kings (52%) and New York (44%) Counties were far higher than counties outside of New York City, including counties with large urban centers such as Erie (24%), Monroe (20%), and Onondaga (19%) Counties.
- The lowest poverty rates for children were found in Nassau (9%) and Putnam (5%) Counties. Such low rates probably reflect the largely suburban nature of these counties as well as the absence of a large urban center.
- Many rural counties had relatively high child poverty rates, in many cases equal to or higher than rest-of-State counties with large urban centers. Rural counties with high child poverty rates include: Allegany (26%), Chautauqua (26%), St. Lawrence (26%), Cattaraugus (24%), Franklin (23%), Sullivan (23%), and Yates (23%)

# PUBLIC ASSISTANCE PROGRAM PARTICIPATION

#### Definition:

The measures show the number and percent of children and youth ages birth through 17 receiving various types of means-tested governmental assistance. Table 2A shows the number and percent of children receiving: Aid to Families with Dependent Children (AFDC) or Home Relief (HR); and Supplemental Security Income (SSI). Table 2B shows the number and percent of children receiving food stamps.

#### Significance:

The rate at which children receive support from such programs provides points in time, not estimates, such as those used in producing county poverty (a relatively small part of the total number of children receiving food stamps programs generally means that the child is living in a household with income near or below the poverty level. However, the level of economic distress and gram. For example, children receiving food stamps, but not public assistance degree of dependency will vary somewhat depending on the particular proshown in the table), and some children receiving SSI have somewhat higher ernment support to meet the basic income and food needs). Moreover, the rates in the years between the decennial census (reported in Table 1 of this numbers reported here are based on actual counts of children at particular a measure of dependency (i.e., the number of children dependent on govassessing economic well being, since a child's participation in any of these household incomes and are more likely to have working parents than chilvolume). As such, they are a useful addition to the child poverty rate for dren receiving public assistance.

## New York State Findings:

#### Public Assistance

The number and rate of children receiving public assistance (i.e., Aid to Families with Dependent Children or Home Relief) declined between 1993 and 1996. In 1993, 815,169 or 18.6 percent of children received public assistance in New York State as compared to 702,893 or 15.8 percent in 1996.

- While the rates of children in New York City receiving public assistance declined between 1993 and 1996 from 31.5 percent to 27.5 percent, the rate of children receiving public assistance in New York City remains over three times greater than the rate for the rest of the State.
- In the rest of the State, the highest percentages of children and youth receiving cash assistance were Monroe (16.1%), Erie (13.8%), Onondaga (12.4%), and Chautauqua (11.7%). The lowest participation rates were Putnam (1.0%), Saratoga (1.8%), Hamilton (2.8%), Otsego (3.1%), Madison and Wyoming (3.2%), Warren (3.3%) and Nassau and Yates (3.9%).

## Supplemental Security Income

There was a slight increase in children receiving Supplemental Security Income (SSI) between 1993 and 1996. In 1993, there were 66,243 or 1.5 percent of children receiving SSI; by 1996, there were 86,498 or 1.9 percent. This was due primarily to an increase of 11,942 children receiving SSI in New York City.

#### Food Stamps

- In December 1996, one in five children residing in New York State was receiving food stamps. Receipt of food stamps declined by 2 percentage points in the State between 1993 and 1996. In New York City, during December 1996, one in three children received food stamps (579,760 or 33.2%) and one in eight received food stamps in the rest of the State · (333,288 or 12.3%). In 1993, these figures were 625,510 or 36.2 percent of children living in New York City and 361,166 or 13.6 percent of children residing in the rest of the State.
- In the rest of the State, the highest rates of food stamp participation were Monroe (19.5%), Erie (19.2%), Oneida (18.4%), Allegany (17.8%), Chautauqua (17.9%), and St. Lawrence (17.6%). The lowest participation rates were found in Putnam (1.8%), Nassau (4.5%), Saratoga (6.0%), Hamilton (6.6%), and Suffolk (6.7%).

## ILOW BIRTHWEIGHT

#### Definition:

Infants weighing less than 2,500 grams (5.5 pounds) at birth are considered to be low birthweight. The low birthweight rate is the percent of live infants born with low birthweight.

#### Significance:

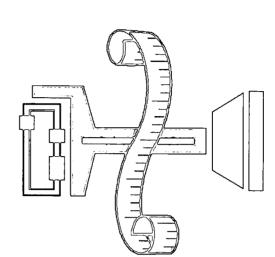

Low birthweight is the strongest risk factor for infant mortality. While survival rates of low birthweight babies have increased due to advances in neonatal medicine, their chances for optimal health and development are reduced. Low birthweight has been associated with mental retardation, birth defects, cerebral palsy, epilepsy, hearing and vision defects, delayed speech, and chronic lung problems. Low birthweight has been linked to a variety of factors, including a lack of early and continuous prenatal care, poor nutritional status of the mother, maternal age, and the mother's use of alcohol and drugs during pregnancy.

(28)

The New York State Public Health Council has identified healthy births as a priority area for public health action and has set an objective to reduce by 2006 the percent of all births with low birthweight (<2,500 grams) to no more than 5.5 percent.

## New York State Findings:

- In 1995, 20,866 babies born in New York State weighed less than 2,500 grams (7.7%). While the number of children born with low birthweight decreased slightly, the percentage of low birthweight babies remained the same. The percentage has changed very little over the last ten years.
- Rates of low birthweight are higher in New York City (9%) than the rest of the State (6.6%).

# INFANT MORTALITY RATE

#### Definition:

Infant mortality is the number of deaths to infants under one year of age. The number of these deaths per 1000 live births is the infant mortality rate. Because infant deaths are relatively rare events in many counties, the infant mortality rates are presented here as three-year averages. This is necessary to improve the reliability (or stability) of the data. For example, in a small county, a serious tragedy such as a fatal fire or an automobile accident may cause the county infant mortality rate to fluctuate greatly from one year to another.

#### Significance:

30

Infant mortality is one of the most widely used indicators of health and welfare worldwide. These rates are also used for needs assessments as well as for monitoring the effectiveness of public health programs and health care systems. Many physiological factors that lead to low birth weight also contribute to infant mortality. One study found that 60 percent of all infant deaths were related to low birth weight (McCormick, 1985). Nevertheless, since the 1980s, advances in medical technology have resulted in a continuous decline in the infant mortality rate, while the percentage of infants of low birth weight has changed very little.

## New York State Findings:

- In the years 1993-95, the infant mortality rate for New York State was 7.9 per 1000 live births. This represents a reduction of 500 infant deaths since the 1990-92 period when the rate was 9.2 per 1000 live births.
- The infant mortality rate was substantially higher in New York City than the rest of the State during both periods. In the years 1990-92, the infant mortality rate for New York City was 10.9 per 1000 live births, as compared to the rate for the rest of the State which was 7.7 per 1000 live births. In 1993-95, the New York City infant mortality rate was 9.1, and the rate for the rest of the State was 6.9.
- For the time period 1993-95, Seneca County (12.2), Madison County (11.9), Herkimer County (10.1), Cayuga County (10.2), and Kings County (10.5) had rates over 10 per 1000 live births.

## Early Prenatal Care

#### Definition:

The early prenatal care rate is the percent of births to mothers who began prenatal care within the first three months of pregnancy (first trimester).

#### Significance:

The likelihood that a woman will give birth to a healthy, full-term baby increases substantially with early prenatal care. Early and regular prenatal care is the most effective method to identify and avoid the preventable causes of low birthweight, preterm delivery, and maternal and infant mortality. Adequate prenatal care is considered to be care which begins within the first three months of pregnancy (first trimester) and includes 12 to 13 visits.

## New York State Findings:

- In 1995, 172,815 or 69 percent of women giving birth received early prenatal care. In 1993, 168,996 or 67 percent of women giving birth received early care.
- Rates of early care in 1995 differed significantly between New York City (58.5%) and the rest of the State (78.1%).
- Bronx county recorded the lowest percent of women receiving early care in both 1995 (48.0%) and 1993 (46.1%). In the rest of the State, only Chautauqua (52.9%), Yates (65.1%), Sullivan (68.8%), and Rockland (68.9%) had percentages below 70 percent.
- The highest rates of early prenatal care in 1995 were found in the rest of State counties, of which several had rates above 85 percent (Albany, Nassau, Putnam, and Saratoga).

## IEALTH EMOTIONAL O Z V

# ASTHIMA HOSPITALIZATIONS

#### Definition:

The asthma hospitalization rate is based on the number of hospitalizations for asthma per 10,000 population in each age group. Asthma hospitalizations are typically highest among infants and toddlers; rates reduce substantially as children reach preadolescence.

#### Significance:

Traditionally, high asthma hospitalization rates have been an indicator of problems with access to or utilization of primary health care. It is thought that many hospital admissions for asthma could be avoided with adequate ambulatory treatment.

The New York Public Health Council has identified access and delivery of health care as a priority area for public health action. It has set as an objective to increase access to ambulatory health and dental services by 2006, so that the amount of hospitalizations for asthma for children aged birth to 14 years is no more than 290 per 10,000 children.

## New York State Findings:

related to asthma among children birth to four years of age. For the reached an all time high in 1993. This age group, by far, experiences ma hospitalization rates for children birth through four years of age rate occurred between 1993 and 1995, it should be noted that asth-In 1995, there were 11,836 hospital discharges in New York State from the 1993 rate of 92.3 per 10,000. Although a decline in the State as a whole, the rate of 86.9 per 10,000 is down somewhat the highest rates for asthma hospitalizations.

- This age group also experienced a decline from the 1993 rate of Among 10 to 14 year olds, the rate was 25.0 per 10,000 in 1995. 31.9 per 10,000.
- tion rates in the State. In 1995, 148.5 per 10,000 children four years New York City residents experience the highest asthma hospitalizaas compared to 42.6 per 10,000 in the rest of the State. Among 10 to 14 year olds, the rate was 44.5 per 10,000 in New York City and old and younger were hospitalized with asthma-related conditions 12.9 per 10,000 in the rest of the State.
- 14 year olds, the counties outside of New York City with the hightions resulting from asthma for children birth to four years of age were found in Montgomery (101.9), Steuben (79.4), Fulton (77.1), Cattaragus (76.0), Saratoga (75.5), and Hamilton (74.9). For 10 to In the rest of the State, the highest rates of reported hospitalizaest asthma hospitalization rates were Cortland (28.2), Hamilton (27.7), and Sullivan (25.5).

# HOSPITALIZATIONS Unintentional Injury 1

#### Definition:

The unintentional injury rate is based on the number of hospitalizations for unintentional injuries among 0 through 19 year olds per 100,000 population in this age group. This includes injuries caused by such occurrences as motor vehicle crashes, drowning, fires, and falls.

#### Significance:

Injuries that are so serious as to cause hospitalization may result in temporary or permanent disability. They are among the leading causes of death for children and youth and one of the most preventable.

# New York State Findings:

- In 1995 in New York State, there were 20,112 hospitalizations for unintentional injuries among 0 through 19 year olds.
- The hospitalization rate for unintentional injuries among children and youth dropped from 463.4/100,000 in 1993 to 400.4/100,000 in 1995.
- Overall, New York City children and youth in 1995 had a higher unintentional injury rate than their rest of State counterparts (453.6/100,000 vs. 365.4/100,000). However, some counties outside of New York City had higher rates than New York City.
- Counties in the rest of the State with the highest rates of hospitalizations due to unintentional injuries per 100,000 children and youth during 1995 were Sullivan (550.0), Cattaraugus (480.2), Steuben (477.0), Otsego (475.4), and Allegany (469.0).

# INIURY HOSPITALIZATIONS SELF-INFLICTED

#### Definition:

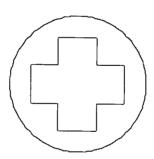

The self-inflicted injury rate is based on the number of hospitalizations for self-inflicted injuries among 10 through 19 year olds per 100,000 population in this age group.

#### Significance:

In New York State, suicide is the third leading cause of death for adolescents. Self-inflicted injury hospitalizations is used as an indicator because it reflects "attempts".

# New York State Findings:

- In 1995, there were 2,001 hospitalizations of youth 10 through 19 years of age for self-inflicted injury.
- In New York City, the self-inflicted injury hospitalization rate for 10 through 19 year olds was 88.7 per 100,000 in 1995. Rates in the five NYC counties ranged from a high of 110.1 per 100,000 in the Bronx to a low of 49.7 per 100,000 in Richmond.
- In 1995, throughout the rest of the State, the self-inflicted injury hospitalization rate varied considerably from county to county. Many had rates much higher than the New York City counties.

### Definition:

This category summarizes the five leading causes of death among NYS children, and the percentage they represent, within each age group.

#### Significance:

fore, presented by State and region (i.e., New York City, rest of the State). tion on cause of death is not reliable for individual counties and is, thereage group. Since the number of child deaths is relatively small, informa-One important way to identify threats to the health of children and youth is to examine causes of death. Causes of death vary according to

# New York State Findings:

#### Infants 1 year old

- ° In 1995, there were 2,062 deaths to children under the age of one in Syndrome (SIDS) was the cause of death in 7.5 percent of the cases. New York State. More than half (55.4%) of these were due to conaccounted for 21 percent of infant deaths. Sudden Infant Death ditions originating in the perinatal period. Congenital anomalies
- were conditions originating in the perinatal period (60%), congenital The highest percentages of deaths to the infants in New York City period (50.2%), congenital anomalies (23.4%), and SIDS (8.4%). anomalies (19%) and SIDS (6.6%). In the rest of the State, the highest percentages were conditions originating in the perinatal

### Children Ages 1 through 9

- Accidents were the most frequent cause of death (21.7%). AIDS was the second leading cause of death (16.2%), followed by congeniral In 1995, there were 649 deaths among children ages 1 through 9. anomalies (11.9%).
- In New York City, the most frequent cause of death was AIDS (27.6%). Congenital anomalies were the second leading cause (13.1%), followed closely by accidents (12.8%).
- 1 The term legal intervention refers to deaths caused in the course of a police officer attempting to make an arrest or intervene during a criminal activity.

### In the rest of the State, accidents were the leading cause of death (31.4%) followed by congenital anomalies (10.6%) and malignant neoplasms (8.0%).

### Youth ages 10 through 19

- In 1995, accidents were the leading cause of death (34.0%) for accounted for 21.3 percent of these deaths while suicide was youth ages 10 through 19. Homicide and legal intervention responsible for 9.7 percent.
- olds due to homicide and legal intervention has declined from 330 The number and percentage of deaths among 10 through 19 year or 30.1 percent in 1993 to 210 or 21.3 percent in 1995.1
- through 19 year olds in 1995 (34%) as compared to 1993 (28.7%). Accidents accounted for a higher percentage of deaths among 10 The total number of deaths due to accidents remained about the
- In New York City in 1995, homicide and legal intervention (36.4%) was the most frequent cause of death in this age group. Accidents were the second most frequent cause (17.3%) followed by malignant neoplasm (9.9%) and suicide (6.4%).
- Although homicide and legal intervention remains the leading cause of death in New York City in this age group, it represents a smaller percentage of all deaths when compared to 1993. In 1993, 271 or 49.3 percent of deaths in this age group were the result of homicide or legal intervention.
- death among youth 10 through 19. Suicide was the second most fre-In the rest of the State, accidents (48.3%) were the leading cause of quent cause (12.6%), followed by malignant neoplasms (8.6%).

# DISEASES Sexually Transmittied

#### Definition:

(STD) per 100,000 teens 15 through 19 years of age. Gonorrhea is the the late 1980's among women, includes any of the first three stages of during late adolescence. Early Syphilis, which increased dramatically in The incidence rates for gonorrhea and early syphilis are based on most commonly reported STD which peaks in prevalence in females syphilis (primary, secondary, or latent of less than 1 year's duration). the number of reported cases of each sexually transmitted disease

#### Significance:

Sexually Transmissible Diseases (STDS) are a major cause of morbidito infants born to infected mothers. With the exception of AIDS, women consequences to those who fail to get appropriate treatment and the risks ty among adolescents. This is of great concern because of the serious suffer more serious, long-term consequences of STDs than men. Complications from the most common STDs include:

44

- to damaged fallopian tubes, as well as chronic pelvic pain in individcervix, and an increased risk of infertility or ectopic pregnancy due pelvic inflammatory disease, infections of the urinary tract and uals infected with gonorrhea and chlamydia; 1
- transmission of active disease to infants whose mother is infected transmission of serious or fatal infection to the fetus or newborn with chlamydia, herpes simplex virus, hepatitis B or syphilis; and resulting in stillbirths, prematurity, congenital abnormalities, and 7
- disabling lesions of the skin, bone, central nervous system, and cardiovascular system in individuals manifesting late syphilis. 3

syphilis in the mother, virtually all fetuses will be infected. Half of these Congenital transmission of syphilis is most likely during the early stages of maternal infection. With untreated primary or secondary

birth. The risk of fetal infection declines if the mother becomes pregnant during the later stages of syphilis infection. Syphilis in newborns pregnancies will end with a stillborn, a neonatal death, or a premature include skin and bone lesions and enlargement of the liver and spleen can affect virtually all organ systems. Common early manifestations (DOH, Bureau of Child and Adolescent Health, 1995). The New York Public Health Council has identified adolescent sexual activity as a priority area for public health action. As such, it has set as sexually transmitted diseases in the previous five years is decreased by 20 an objective to reduce, by 2006, unsafe sexual practices so that the percentage of adults 18 years of age and older who had to be treated for percent.

# New York State Findings:

- In New York City, the 1993-95 gonorrhea case rate for 15 through 19 year olds was almost double the rate in the rest of the State (896.4 vs 470.4 per 100,000).
- The highest rates among 15 through 19 year olds per 100,000 of gonor-(1299.7), and Erie (1184.3) Counties. Rates per 100,000 for early syphilis rhea were found in Monroe (1698.5), Onondaga (1450.4), New York Richmond (27.5), Monroe (18.8), Sullivan (15.4), and Queens (13.8). were highest in the Bronx (51.3), New York (39.9), Kings (28.6)
- declined substantially from 1990-92. In 1993-95, the gonorrhea case rate for 15 through 19 year olds was 634.1 per 100,000, down from 702.1 per 100,000 in 1990-92. The incidence rate for syphilis was During 1993-95, the incidence of sexually transmitted diseases down significantly from 55.2 per 100,000 in 1990-92 to 15 per 100,000 in 1993-95.

# ANDOLESCENT PREGNANCIES

#### Definition:

Pregnancies are the sum of the number of live births, reported induced terminations of pregnancies, and reported fetal deaths of all gestations. The adolescent pregnancy rate is the number of pregnancies per 1000 females between 10 and 19 years of age. Rates are presented for adolescents ages 10 through 14, 15 through 17, and 15 through 19.

#### Significance:

Pregnancies interrupt the ideal psychological and social development of adolescents, particularly those under the age of 18. Studies have shown that the conditions that predispose a teen to pregnancy—poverty, family instability, academic and social problems in school, despair over future opportunities—may influence the success or failure of parenting as much as age. The double effect of low-income status prior to birth and failure to complete high school places adolescent parents in a particularly vulnerable position economically (Furstenberg, 1991; Carter, et al., 1994).

48

The physiological risks of a pregnancy for an adolescent are greater than they are for women in their twenties. Pregnant adolescents experience more complications during pregnancy (e.g., toxemia, anemia) than older mothers, and their infants are at higher risk of low birthweight and developmental problems.

The New York Public Health Council has identified adolescent sexual activity as a priority area for public health action. As such, it has set an objective to reduce, by 2006, the adolescent pregnancy rate to no more than 2 per 1,000 girls aged 10 through 14 and no more than 50 per 1,000 girls aged 15 through 17.

## New York State Findings:

- In 1995, there were 51,283 pregnancies to young women ages 15 to 19 in New York State. The pregnancy rate was 90.1 per 1000 adolescent females, which represents a decrease from the 1993 rate of 95.3.
- The decline in the pregnancy rate occurred in both New York City and the rest of the State among all adolescent age groups. In New York City the rate for 15 through 19 year olds decreased from 144.6 in 1993 to 134.9 in 1995. In the rest of the State, the rate was 64.3 in 1993 and 61.5 in 1995.
- In 1995, the adolescent pregnancy rate for 15 through 19 year olds residing in New York City was more than double the rate for teens residing in the rest of the State (134.9 vs 61.5).
- Pregnancy rates among adolescents (aged 15 to19) varied throughout the State in 1995. Bronx County posted the highest rate (193.7) followed by Kings (131.0) and New York (129.6). In the rest of the State, the only county with a rate over 100 was Sullivan (107.1). The lowest rates were seen in Putnam (23.3) and Tompkins (29.1) Counties.

# GOAL FF4

ERIC

TO LIME, CHILDREN WILL LEAVE SCHOOL PREPARED

LEARN AND WORK IN A COMMUNITY AS

CONTRIBUTING MEMBERS OF SOCIETY.

### OBJECTIVES:

- © Children will come to school ready to learn.
- Situdants will meet or execed high standards for academic performance and demonstrate knowledge and skills required for lifelong learning and self-sufficiency in a dynamic world. 0
- Sindents will be educated in a safe, supportive, drug free and nurhuring anvironment. 0
- Students will stay in school until successful completion. 0

# PUPIL EVALUATION PROGRAM (PEP) TEST SCORES

#### Definition:

In the elementary grades, Pupil Evaluation Program (PEP) tests are the primary State measures of student performance. Students take criterion-referenced PEP reading and mathematics tests at the end of grades 3 and 6 and a writing test at the end of grade 5.

#### Significance:

Students scoring at or above the State Reference Point (SRP) are considered to be making adequate progress in developing the basic skills of reading comprehension, mathematics and writing. Students who score at or above the Quality Point (QP) are considered to have achieved mastery of State content standards in that area. All pupils scoring below the designated SRP are given remediation.

# New York State Findings:

- In 1996, 79 percent of New York State's public school students scored above the SRP in third grade reading and 95 percent scored above the SRP in third grade mathematics. This reflects a decrease in reading scores and a slight increase in mathematics scores since 1994. There was a 5 percent drop in third grade reading scores and a 3 percent increase in third grade mathematics scores in New York City between 1994 and 1996.
- Grade 6 reading scores in New York State decreased slightly in 1996, with 82 percent of all public school students scoring at or above the SRP compared to 83 percent 1994.

- In 1996, New York City continues to show smaller percentages of public school third grade students scoring at or above the third grade reading SRP (59%) versus the rest of the State public schools (90%). Similar differences are demonstrated in sixth grade reading, 64 percent in New York City versus 91 percent in the rest of the State. Smaller but significant scoring differences are shown for public school third grade mathematics, 88 percent versus 99 percent, and sixth grade mathematics, 84 percent versus 98 percent.
- In 1996, 41 percent of New York State's public school students scored at or above the mastery level in sixth grade reading. In New York City, 24 percent of the students scored above the mastery level in sixth grade reading compared to 51 percent in the rest of

#### NOTE:

Test scores are not available by county for non-public school students. With the exception of data on students in limited English proficiency programs, the data presented in this report refer to public school students only. Please note that data for counties always refer to the county in which the school district office is located, not the county in which the student resides.

# Limitted English Proficiency

#### Definition:

Limited English Proficiency (LEP) students come from a home where a language other than English is spoken and score at or below the 40th percentile on an English language assessment instrument.

#### Significance:

Limited proficiency in English may hinder children's abilities to benefit from their educational experience and achieve high standards. Identified students are entitled to special instruction and assessment services to assist them in learning English and achieving objectives in other academic areas. These services are of two general types:

Bilingual Education Programs – implemented in school districts which have an enrollment of 20 or more LEP students of the same grade level assigned to the same building and all of whom have the same native language, which is other than English.

8

Free Standing English as a Second Language – implemented in school districts which have fewer than 20 LEP pupils at the same grade level assigned to a building who speak the same language other than English.

# New York State Findings:

- One hundred thirty-five languages were spoken by over 198,000 LEP students in New York State in 1994-95. Five languages account for over 85 percent of LEP students. Those languages were Spanish, Chinese, Russian, Haitian Creole and Korean. (Note: The number of students speaking Russian has now surpassed the number speaking Haitian Creole since the previous year.)
- In 1995-96, the number of LEP students served by public and non-public schools was 219,394. This represented 7.9 percent of the students in New York State.
- Since 1990-91, the number of LEP students has increased by over 30 percent.
- LEP students were concentrated in New York City, where public and nonpublic schools enrolled 81 percent of all identified LEP students in the State. In 1995-96, 17.2 percent of New York City's students were identified as being limited English proficient, more than seven times higher than the percentage (2.4%) in the rest of the State.
- The percentage of LEP students in New York City increased from 13.9 percent in 1993-94 to 17.2 percent in 1995-96.

# ANNUAL DROPOUT RATE

#### Definition:

In New York State, the annual dropout rate refers to the proportion of students in grades 9-12 who left school prior to graduation for any reason, except death, and did not enter another school or high school equivalency preparation program. Annual high school dropout rates are calculated by dividing the number of students who drop out during a single year by the grade 9-12 enrollment for that year.

#### Significance:

Beyond its inherent message of failure for students who drop out, young people who do not complete high school are at a great disadvantage in today's society. Dropouts have far higher unemployment rates than high school graduates. When employed, they earn less, are more likely to be in semi-skilled manual jobs and work at jobs with poorer working conditions. The social and personal costs include foregone tax revenues, decreased productivity, increased demand for and reliance on social services, increased probability of criminal activity, reduced political participation, and generally poorer health.

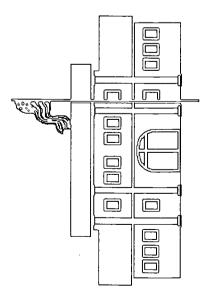

**(62**)

# New York State Findings:

- In 1994-95, New York City had a dropout rate of 6.7 percent¹; the other Large City School Districts (Buffalo, Rochester, Syracuse and Yonkers) had a combined dropout rate of 5.2 percent, which was more than twice the dropout rate of 2.4 percent for all public schools outside of the five Large City School Districts.
- Total State dropout rates have remained fairly stable at about 4 percent from 1991 through 1995 but have decreased substantially since 1985-86 (5.1%).
- In 1994-95, 62.4 percent of youth who dropped out of school attended New York City public schools.
- The counties outside New York City in which the highest percentages of youth dropping out of school were Chemung (6.1%), Oswego (4.6%), Seneca (4.3%), Sullivan (4.2%) and Rensselaer (4.1%).

#### NOTE:

Annual dropout rates are not readily calculable for the boroughs (counties) of New York City, since so many students cross borough lines to attend school.

# Amanual Dropouts in Public Schools

# REGENTS ENDORSED DIPLOMAS

#### Definition:

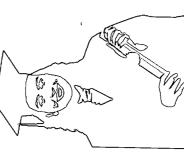

Regents diplomas are awarded to students who have both passed a series of Regents examinations, demonstrating a certain level of achievement, and passed the prescribed coursework.

#### Significance:

In New York State, a Regents diploma signifies rigorous effort and excellent accomplishment. The State minimum requirements for a Regents-endorsed diploma are more rigorous than those for a local high school diploma. The percentage of students receiving Regents diplomas each year is an indicator of attainment for the educational system.

To implement new, higher standards for all students, the less rigorous Regents Competency Tests (RCTs) are being phased out. This process was begun with students first entering grade 9 in 1996 and will be almost completed by 1999. At that time, incoming freshmen will be required to earn passing marks on Regents examinations in all four core subject areas to receive a high school diploma.

64

# New York State Findings:

- In 1995-96, almost three-quarters of public and nonpublic secondary schools statewide awarded Regents diplomas, including 93 percent of public schools and 39 percent of non-public schools.
- In 1996, 40 percent of New York State's public high school graduates received Regents diplomas. This figure has remained relatively constant since 1989-90.
- Nineteen percent of public high school graduates in New York City received a Regents diploma in 1996 compared to 47.8 percent in the rest of the State. These figures have remained relatively constant since 1989-90.
- In 1995-96, public high schools in Ontario (62%), Madison (55%), Saratoga (55%), and Putnam (55%) Counties had the highest percentages of students graduating with Regents diplomas. Graduates in Hamilton (23%), Westchester (34%), Franklin (40%) and Sullivan (40%) Counties earned the lowest percentages of Regents diplomas among counties outside of New York City.

# ENROLL IN COLLEGE HIGH SCHOOL GRADUATIES INTENDING TO

#### Definition:

The rate of college bound New York State high school graduates is intend to enroll in four-year and two-year postsecondary institutions as based on secondary school reports of the number of seniors who well as other postsecondary education programs.

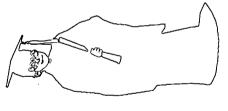

#### Significance:

Educational attainment is strongly related to future earnings. An educated workforce is essential to a healthy State economy,

# New York State Findings:

The Statewide rate of college bound high school graduates, both substantially higher than in 1975 (67.3%), but has not changed public and non-public schools combined, in 1995 (82.6%) was significantly since 1991 (82.0%).

- form of postsecondary education in 1995. More than half planned More than 8 in 10 high school graduates planned to pursue some to attend a four-year college.
- A greater percentage of non-public than public school graduates intended to continue their education, 91.8 percent compared to 81.0 percent.
- public school students (49.4%) to plan to attend four-year institu-Non-public school students were much more likely (73.0%) than tions.
- Rates of college bound New York City public high school graduates (82.1%) is slightly higher than the total State rate for public school students.

#### Cirizenship

CITZINSHIP AS LAW-ABIDINS, CONTRIBUTINS MEMBERS OF THEIR CHILDREN AND YOUTH WILL DEMONSTRATIE GOOD

60AL 775

FAMILIES, SCHOOLS AND COMMUNITIES.

### OBJECTIVES:

- Children and youth will assume personal responsibility for their behavior. 0
- Youth will elemensimate ethical behavior and civic values.

0

- Children and youth will understand and respect people who are different from themselves. 0
- Children and youth will participate in family and community activities. 0
- Children and youth will have positive peer interestions. 0

Children and youth will make constructive use of leisure time.

- Youth will delay becoming parents until adultheed. 0
- Children and yeuth will refrain from violense and other illegal behaviors. 0

# ITIZENSHIP

### CRIMES WIOLENT AND PROPERTY FOR ARRESTS ANDOLESCENT

#### Definition

New York State Uniform Crime Report (UCR) violent index crimes include murder, non-negligent manslaughter, forcible rape, robbery, and aggravated assault. Property index crimes include burglary, larceny, and motor vehicle theft. An arrest is counted on each separate occasion a person is taken into custody, notified, or cited by a law enforcement official. An arrest is recorded in the jurisdiction where it occurs (this jurisdiction is not necessarily where the crime occurred), and only the most serious offense that was committed during a crime incident or multiple crime incidents is recorded. It is important to note that many persons who commit crimes are never arrested, a single arrest can involve multiple crime incidents, and more than one person can be arrested for the same crime incident. The adolescent arrest rates are calculated by dividing the number of reported adolescent arrests for violent and property index crimes by an estimate of the population of youth in the appropriate age category.

#### Significance:

(2)

The reasons why adolescents misbehave or commit crimes are very complex. Most adolescent behaviors simply represent limit-testing and experimentation with adult activities. Some engage in more serious acts of delinquency or crime that may bring them to the attention of the juvenile or criminal justice systems. In these cases, there is cause for concern that adolescents are not preparing to assume responsible adult roles. Still others commit serious criminal acts, including acts of violence, that indelibly mark their lives as well as the lives of their victures.

Arrests of adolescents are handled by different parts of the justice system, as determined by the age of the youth and the type of offense. In general, arrests for youth aged 15 and under are handled by the juvenile justice or family court system. Arrests for youth ages 16 and older are prosecuted in the criminal court system. The majority of other states see youth up through the age of 17 in the family or juvenile court system. Under New York's laws governing juvenile offenders, youth age 13 through 15 can be prosecuted in the criminal court system for specified serious offenses.

The numbers of arrests in the New York State Uniform Crime Report (UCR) for violent and property index offenses are primarily a gauge of law enforcement's response to crime. These numbers are the best official indicator of the relative level of criminal activity among youth throughout New York State. A distinction is made between violent and property offenses because the arrest trends for these two categories generally differ. Compared to 1986, the juvenile arrest rate for violent index offenses in 1996 increased 55 percent for 13 to 15 year olds while that for property index offenses declined by 5 percent.

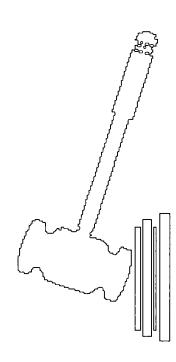

# New York State Findings:

There were 64,950 arrests for violent and property index crimes in New York State during 1995 involving youth 10 through 19 years of age. Thirty-seven percent of these arrests were for violent crimes.

# ITIZENSHIP

# Aidolescent Arrests for Violent and Property Crimes (comt'd.)

- In 1995, 75 percent of the arrests for violent index crimes involving youth 10 through 19 years of age occurred in New York City, despite the fact that about 40 percent of the State's youth in this age range lived there. In contrast, New York City accounted for only 29 percent of the State's adolescent arrests for property index crimes.
- Compared to 1993, arrest rates per 1,000 youth (in respective age categories) in 1995 for violent index crimes were 3 percent higher for youths ages 16 to 19 and 2 percent lower for youths ages 13 to 15. There was no change in violent index arrest rates for youth ages 10 to 12. Arrest rates for property index crimes were 12 percent higher for youths ages 16 to 19, 7 percent higher for youths ages 15 to 15, and 8 percent higher for youths ages 10 to 12 years of age.
- In New York City, three in five of the 1995 arrests for index offenses involving youths 10 through 19 years of age were for violent index offenses. Outside the City, only one in five of the youths in this age group arrested for index crimes was charged with a violent index offense.

# Assault Hospitalizations

#### Definition:

The assault hospitalization rate is based on the number of hospitalizations resulting from an assault per 100,000 population aged 10 to19.

## Significance:

Violent and abusive behavior has been identified as a priority area of concern by both Healthy People 2000 and Communities Working Together for a Healthier New York. Homicide is the second leading cause of deaths for New Yorkers 10 to 19 years of age. Assault hospitalizations is an important adjunct indicator as it presents the serious morbidity caused by violent behavior.

# New York State Findings:

- In New York State, 2,038 youth between the ages of 10 to 19 years were hospitalized due to an assault in 1995. The rate of 86.2 per 100,000 10 to 19 year olds in 1995 was down from 114.4 per 100,000 in 1993.
- More than seventy percent of the 1995 New York State assault hospitalizations for children and youth age 10 to 19 years of age in New York State occurred among residents of New York City. The New York City rate was 159.4/100,000 versus 40.3/100,000 in the rest of the State.
- During 1995, urban counties in New York State experienced the highest rates of assault hospitalizations.

# Youth Drug Arrests

#### Definition:

The youth drug arrest rate is based on the number of arrests for the use, possession or sale of drugs, public narcotic intoxication or driving under the influence (DUI) of narcotics, per 10,000 youth 10-20 years of age.

## Significance:

Regular use of controlled substances is strongly related to negative health, mental health, educational and other social problems for youth. For example, a landmark longitudinal study, funded by the U.S. Department of Justice, Office of Juvenile Justice and Delinquency Prevention, examined the causes and relationships between drug abuse and urban delinquency (Huizinga, Loeber and Thornberry, 1994). The study found that, controlling for age, gender, and ethnic group, the greater a youth's involvement in drug use, the more serious their delinquency, and vice versa. The evidence is growing that early successes in preventing early drug use can reduce serious delinquency, alcohol problems and drug addiction in older adolescents and young adults.

Community indicators are not direct measures of the population's behavior, but are instead measures of the performance of the community service systems that generate them. Indicator data produced by public service or social control agencies are affected by policy shifts, resource fluctuations, degree of centralization and standardization, local reporting

practices and local service delivery differences. Local qualitative information regarding the "role" of the indicator in the context of its service setting must be obtained and applied when interpreting the results of indicator-based studies. The rate of youth drug arrests is a direct measure of law enforcement response to youth alochol and other drug (AOD) use and an indirect measure of youth AOD use in the population.

# New York State Findings:

- Drug arrests of NYS youth (ages 10-20) rose 55 percent between 1993 and 1995, with NYC accounting for 63 percent of this increase.
- About 38 percent of NYS youth (ages 10-20) reside in NYC, but 57 percent of drug arrests were in NYC in 1995.
- Youth placed in NYS juvenile correctional facilities had a much higher prevalence of alcohol and other drug use than students in NYS schools (OASAS, 1996; Rainone, 1996). More than twice as many had smoked marijuana (78% vs. 35%), and more than three times as many had tried cocaine (17% vs. 5%).
- In 1994, New York City police arrested 1,700 children under age 16 for drug dealing or possession (CASA, 1996).

# CITIZENSHIP

# DRIVING WHILE INTOXICATED

#### Definition:

Youth arrested for driving while intoxicated (DWT) is defined as the rate of arrests for driving while intoxicated, per 10,000 youth (ages 16-20). Youth involved in auto accidents while intoxicated is defined as the rate of youth who were intoxicated and involved in an automobile accident (as a driver, passenger or pedestrian), per 10,000 youth (ages 16-20).

## Significance:

The use of alcohol impairs vision, cognitive judgement, coordination and motor skills and can inhibit short term memory and the ability to concentrate. At a very low blood alcohol content (BAC) (e.g., .02-.03), alcohol also impairs the ability to attend and respond to complex stimuli, such as road and traffic conditions, speed, traffic control devices, lane position, pedestrians, other vehicles, roadway signs, etc. (Brick, 1996). Youth have less driving experience than adults, and their simultaneous inexperience with alcohol greatly increases the risk of auto accidents, injury and death.

**8**/**8** 

# New York State/National Findings:

- Nationwide, the rate of youth arrest for DWI has been declining, and this trend is mirrored in the New York State statistics. In 1990, there were 6,327 youth DWI arrests in New York State, and the rate was 49 per 10,000 youth ages 16 through 20. In 1995, the number had been cut in half to 3,110 arrests with a rate of 25 per 10,000 youth.
- The downward trend in United States alcohol-related traffic deaths among youth ages 15 to 20 ended in 1996, with an increase for the first time in seven years, from 2,206 in 1995 to 2,315 in 1996 (National Highway Traffic Safety Administration, July, 1997).

- The number of alcohol-related traffic accidents involving youth between the ages of 16 to 20 has increased in New York State since the 1993 low point of 716 to the 1995 total of 744.
- A great majority of New York State youth DWI arrests occur outside New York City (96% in 1995).
- Five percent of New York State youth ages 17 to 18 and ten percent of New York State youth ages 19 to 20 reported they have driven while intoxicated in the past month (1996 OASAS Youth Alcohol Survey). If these results were representative of all 17 to 20 year olds outside New York City, approximately 50,000 youth would have driven while intoxicated in one month in 1996.
- One quarter of New York State youth (ages 16-20) report they have ridden in a motor vehicle operated by an alcohol-impaired driver in the past month (1996 OASAS Youth Alcohol Survey). If these results were representative of all 16 to 20 year olds outside New York City, approximately 195,000 youth would have ridden with an alcohol-impaired driver in one month in 1996.

# (IPIINS) SUPERVISION PERSONS IN

#### Definition:

Complainants in these cases are generally parents or school officials who are seeking the formal intervention of the family court to control a juvethese counties were excluded from the chart. The rate for PINS cases is calculated by dividing the number of PINS cases opened by an estimate PINS complaint is filed. Only the aggregate number of cases is reportdepartments because of non-criminal misconduct such as truancy from ed by local probation departments to the State, making it impossible to departments in Columbia, Erie, and Otsego Counties did not routinely of the population of juveniles 10 through 15 years of age; the populapresent frequencies and rates by age categories. Also, local probation Persons in Need of Supervision (PINS) are juveniles less than 16 nile's misconduct. PINS cases are recorded in the county in which a tion of juveniles less than 10 years of age was excluded, because few report the number of cases opened in either 1993 or 1995, or both; years of age for whom complaints were filed with local probation PINS complaints are filed for juveniles in this lower age category. school, incorrigibility, ungovernability, or habitual disobedience.

# Significance:

The number of PINS cases opened by local probation departments is the best official indicator of the level of noncriminal misconduct among youth that is perceived as sufficiently serious by parents, school officials and other authorities to warrant the family court's intervention.

# New York State Findings:

- There were 19,042 persons in need of supervision (PINS) cases reported opened by local probation departments in New York State during 1995. Twenty-seven percent of these cases were opened in New York City.
- Compared to 1993, there was a 2 percent increase statewide in the number of PINS cases opened in 1995. However, regional percentages show that the number of PINS cases opened decreased by 11 percent in New York City, while the rest of the State saw a 9 percent increase in these cases.
- The number of PINS cases opened in 1995 per 1,000 children 10 through 15 years of age was substantially lower in New York City than in the rest of the State (rate of 9.2 vs 17.3).

 $\left[ \mathbf{8}
ight]$ 

- Within New York City, rates for PINS cases opened ranged from 6.8 in Richmond County to 13.7 in Bronx County.
- PINS case rates for suburban New York City counties were similarly low: Nassau County (7.3), Suffolk County (10.1), and Westchester County (11.2).
- Among the 54 remaining counties, 17 counties have PINS case rates that range from 15.0 to 20.0, and 24 other counties have rates exceeding 20.

# PRESENCE OF PARENTS

#### Definition:

The presence of parents rates reflect the percentage of children (aged 0-17) living with a single parent, with two parents, or with no parents, based on 1990 Census.

## Significance:

The number of parents living with children is often associated with the economic and parenting resources available to the child. While many single-parent families have other adults in the house-hold (other relatives or parent substitutes) who may contribute to child rearing, and while the presence of two parents does not equate to a nurturing atmosphere, on average, two-parent families have more resources than single-parent families.

# New York State Findings:

- In 1990, more than a quarter (28%) of the children in New York State were living with a single parent. Another 5 percent were not living with any parent.
- The percentage of New York State children living with a single parent or with no parent increased during the last decade. In 1980, 23 percent of New York's children were living with a single parent, and 3 percent were not living with a parent.

- Children in New York State were slightly more likely to be living with a single parent than children across the United States. In 1990, 25 percent of children in the United States lived with a single parent Additionally, children in New York State were more likely than children in the U.S. (3%) not to be living with a parent (U.S. Bureau of the Census, 1994c).
- In 1990, children living in the Bronx were more likely than children in other counties to be living either with a single parent (55%) or with no parent (8%). Thus, just 37 percent of the children in the Bronx were living with two parents. Fewer than half (46%) of the children living in New York County were living with two parents. No other counties in the State had fewer than half of their children living with two parents.
- Children in Putnam County (89%) had the highest percentage of children living with two parents. Just 8 percent of children in Putnam County were living with a single parent and 3 percent were not living with a parent.

# Indicated Reports of Child Abuse and Maltreatment

#### Definition:

The State Central Register receives reports concerning alleged incidents of abuse and neglect in families and publicly licensed settings, (incidents where the perpetrator is a stranger are handled by the criminal justice system). A report becomes "indicated" when there is sufficient evidence that a child has experienced abuse and/or neglect. The rate of child abuse and maltreatment is determined by dividing the total number of indicated reports in a given year by the total number of families in that same year by and multiplying by 1,000.

## Significance:

Victims of child abuse and neglect can suffer long-term social and psychological consequences. Disproportionate numbers of runaway and homeless youth, youth in residential placements in the juvenile justice system, and adults incarcerated in the criminal justice system have histories of being abused as children. Abused and neglected children are at higher risk of abusing their own children when they become parents.

98

Children may suffer from child abuse and neglect regardless of their socio-economic status and racial or ethnic background. Incidents of abuse and neglect most frequently occur in the victim's own home and are perpetrated by someone they know.

The number of indicated reports of child abuse and neglect is an important measure of the incidence of child abuse and neglect in New York State. It should be noted, however, that the rate of indicated reports among families is affected by a number of factors other than the actual incidence of abuse and neglect. Therefore, some caution is required in drawing conclusions concerning the overall prevalence of

abuse and neglect or differences between counties in such rates. First, some cases of abuse and neglect are never reported. Second, some incidents are reported more than once. Third, reports tend to rise for reasons unrelated to the actual prevalence of abuse and neglect, such as a highly publicized case, a public awareness campaign or an addition to the list of those required to report suspected abuse and neglect (i.e., mandated reporters). Finally, sufficient evidence may not be available to "indicate" the report. The high rates of indicated abuse or neglect reports in some counties may reflect better reporting or reliance on lower standards of evidence to indicate cases. Conversely, low rates may be the result of low reporting or stricter standards of evidence.

# New York State Findings:

- In 1993, 18 families per 1000 families in New York State had an indicated report of child abuse or neglect. By 1996, this figure had risen to almost 20 per 1000 families.
- The rate at which families have an indicated report of child abuse or neglect in 1996 is somewhat higher in New York City (21 per 1000 families) than in the rest of the State (19 per 1000 families). This pattern is consistent with that found in 1993 (19 per 1000 families in New York City vs. 18 per 1000 families in the rest of the State).
- In 1996, high rates of indicated child abuse and neglect cases were found in both urban and rural counties. Cortland County (49.5/1000) had the highest rate, followed by Chemung (48/1000), Chautauqua (39/1000), and Fulton (33.5/1000).

# Subsequent Indicated Reports of Abuse/Maltreatment

#### Definition:

A Child Protective Services (or CPS) case is defined as a family with one or more children who were named in a report to the State Central Registry (SCR) as having been abused or neglected. A case becomes "indicated" when CPS determines that there is sufficient evidence to substantiate the reported abuse or neglect. A CPS case is considered to have a subsequent indicated report if any member of the case is involved in another indicated report of abuse or neglect, either as a perpetrator or a victim, within 21 months.

## Significance:

The main purpose of the child welfare system is to ensure the safety and well-being of children. An important measure of how well the system is doing its job is the extent to which children that CPS has determined to have been abused or neglected are subjected to further abuse or neglect.

88

Care should be taken in interpreting differences among counties in rates of subsequent indicated abuse or neglect reports. Reports made to the SCR do not represent the actual prevalence of child abuse and neglect. Many cases of abuse and neglect go undetected, a substantial percentage of those that are detected are not reported to the SCR, and many of the reports made to the SCR are not substantiated. Consequently, high rates of subsequent abuse or neglect reports in certain counties may represent better reporting or a reliance on lower standards

of evidence to indicate cases. Conversely, low rates may be the result of low reporting or stricter standards of evidence. In fact, services that would be expected to result in low rates of repeat abuse and subsequent reports - e.g., an extensive network of preventive services - may have the effect of lowering subsequent abuse but increasing repeat reports, because preventive workers are in a position to observe or hear about incidences of abuse or neglect which may otherwise not be identified.

# New York State Findings:

- Nearly a third (34%) of the CPS cases in New York State that were indicated between May 1994 and April 1995 were involved in a subsequent indicated abuse or neglect report within 21 months.
- The percentage of CPS cases with subsequent indicated reports of abuse or neglect was lower in New York City (29%) than in the rest of the State (38%).
- The highest rates of subsequent indicated reports were found in Albany (50%), Delaware (49%), Chemung (47%), and Cortland (47%).
- The lowest rates of subsequent indicated reports were found in Putnam (23%), Rockland (26%), Franklin (26%), and Cayuga (27%).

<sup>1</sup>To calculate percent, cases with an indicated report of abuse or neglect between May 1994 and April 1995 were tracked for a 21 month period to determine whether or not there were repeat indications of abuse and/or neglect. Source: NYS Office of Chilren and Family Services

# CARE FOSTER MOUTTHI IN CHIILDREN AND

#### Definition:

Children in foster care are those who are in the care and custody of the Commissioner of the local department of social services. The rate of foster care placement is calculated by dividing the number of children in placement on December 31 of a given year by the population of children and youth birth through 17 years of age living in New York State during that year and multiplying by 1,000.

## Significance:

Children are placed into foster care for a wide variety of reasons: for safety, because their families are at least temporarily unable to care for them, for specialized care or treatment, or because their behavioral problems have led to a placement. Since children in foster care make up over 80 percent of those in out-of-home care in New York State, this measure also provides insight into the extent to which children are removed from their homes and placed in out-of-home care in New York State.

# New York State Findings:

- In 1993, the foster care placement rate in New York State was 14 per 1,000 children. By 1996, this had dropped to 12 per 1,000 children.
- Children in New York City experience foster care placement much more frequently than children in the rest of the State. The placement rate for New York City in 1996 is 23 children per 1,000, while in the rest of the State it is only 5 per 1,000. This pattern is consistent with that found in 1993, when 27 children per 1,000 were in

foster care in New York City, and only 5 per 1,000 children in the rest of the state were placed in foster

ERIC TO THE PROVIDENCE OF THE PROVIDE OF THE PROVIDENCE OF THE PROVIDENCE OF THE PROVIDENCE OF THE PRO

CHILDREN, YOUTH AND FAMILIES WITH HEALTHY, SAFE, NEW YORK STATE COMMUNITIES WILL PROVIDE AND THRIVING ENVIRONMENTS.

# OBJECTIVES:

- Communities will be economically sound. 0
- The anvironment will be free of pollutants (e.g., air and water quality will mast healthful standards). 0
- Nzighberheeds will be erime free. 0
- Adequate housing will be available. (3)
- Adaquate transpertation will be available. 0

## Community

# **601 738**

ERIC Profits

NEW YORK STATE COMMUNITIES WILL PROVIDE CHILDREN, YOUTH AND THEIR FAMILIES WITH OPPORTUNITIES TO HELP THEM MEET THEIR NEEDS FOR PHYSICAL, SOCIAL, MORAL, AND EMOTTONAL GROWTH.

# OBJECTIVES:

- Communities will make available and accessible formal and informal services (e.g., child care, parent training, recreation, youth services, libraries, museums, parks.) 0
- Adults in the community will provide youth with good role models and opportunities for positive adult interactions. 0
- contributions to community life and to practice skill development. Communities will provide opportunities for youth to make positive 0

# UNEMIPLOYMENT

#### Definition:

Adults 16 years of age and older who are not employed but who have actively looked for work within the last four weeks are considered unemployed and in the labor force (sum of employed and unemployed). The unemployment rate is the percent of unemployed within the labor force.

## Significance:

The rate of unemployment in an area is one indication of the state of the economy of that area and the opportunities for gainful employment.

94

# New York State Findings:

- In 1996, about 540,000 or 6.2 percent of New York State residents were unemployed. This is an improvement over the 1993 rate of 7.8 percent.
- In 1996, the unemployment rate in New York City was 8.8 percent. Bronx County registered the highest rate (10.5%), while New York County was the lowest (7.4%) in New York City.
- Among residents of the rest of the State, the average unemployment rate was 4.7 percent in 1996. Hamilton (10.9%), Jefferson (8.5%), Essex (8.4%), Franklin (8.4%), and St. Lawrence (8.2%) all had rates above 8 percent. The lowest rate was in Tompkins County (3.1%).
- The unemployment rate in New York City (8.8%) is nearly twice that for the rest of the State (4.7%).

# PROPERTY CRIMES KNOWN TO THE POLICE WIOLENT AND

#### Definition:

New York State Uniform Crime Report (UCR) Index Crimes include serious violent and property crimes reported or otherwise known to the police. Violent index crimes include murder, non-negligent manslaughter, forcible rape, robbery, and aggravated assault. Property index crimes include burglary, larceny, and motor vehicle theft. This is not a measure of victimization, because some crimes are not reported or otherwise known by the police. A reported crime is recorded in the jurisdiction where it occurs, and only the most serious offense that was committed during a criminal incident is recorded. The crime rate is the number of reported UCR index crimes divided by an estimate of the general population and multiplied by 1,000.

# Significance:

There are no county-level victimization measures. The number of violent and property UCR index offenses reported or otherwise known to the police are the best official indicators of the relative level of criminal activity throughout New York State. A distinction is made between violent and property offenses, because crime trends for these two categories generally differ.

# New York State Findings:

- There were 827,564 violent and property index crimes reported to the police in New York State during 1995. Eighteen percent of these crimes involved violent index offenses.
- In 1995, 75 percent of the reported statewide violent index crimes and 49 percent of property index crimes occurred in New York City, despite the fact that about 40 percent of the State's population lived there.
- Compared to 1993, New York City's 1995 rates for reported index crime per 1,000 persons decreased 26 percent for violent index offenses (from 21.0 to 15.6) and 27 percent for property index offenses (from 61.0 to 44.8). In contrast, the rest of the State saw violent index offense rates per 1,000 persons decrease 3 percent (from 3.6 to 3.5) and property index offense rates drop 7 percent (from 34.3 to 32.0).
- In New York City, one in four of the index crimes reported to police in 1995 involved a violent index offense. Outside the City, only one in ten reported index crimes involved a violent index offense.

# Ifirearm-Related Crimes Known to the Police

#### Definition:

New York State Uniform Crime Report (UCR) Index Crimes track whether a firearm was present during the commission of a murder, forcible rape, robbery, or aggravated assault. A reported crime is recorded in the jurisdiction where it occurs, and only the most serious offense that was committed during a criminal incident is recorded. The firearm-related crime rate is the number of reported UCR crimes of murder, forcible rape, robbery, or aggravated assault where a firearm was present divided by an estimate of the population of persons of all ages in the general population and multiplied by 1,000.

## Significance:

The number of violent index crimes involving guns that are known to the police is the best official indicator of the frequency with which deadly weapons are used to commit serious violent crimes.

# New York State Findings:

- There were 31,204 firearm-related index crimes reported to the police in New York State during 1995 compared to 56,140 in 1993. This difference represents a 44 percent decline in firearm-related index crimes.
- In New York City, the percentage of the violent index crimes reported to the police that involved a firearm dropped from 31 percent in 1993 to 22 percent in 1995. Outside the City, this percentage dropped from 20 percent in 1993 to 17 percent in 1995.
- In 1995, 79 percent of the firearm-related index crimes reported statewide occurred in New York City, despite the fact that about 40 percent of the State lived there. In 1993, the City accounted for 86 percent of these crimes.
- Compared to 1993, New York City's 1995 rate per 1,000 persons of firearm-related index crime decreased 48 percent, dropping from 6.6 to 3.4 crimes per 1,000 persons. This rate showed a smaller decline of 14 percent for the rest of the State, dropping from 0.7 to 0.6 crimes per 1,000 persons outside New York City.

# TECHINICAL MOTES

#### Children in Poverty:

Commerce, January 1998. The estimates are based on statistical models during the years between the decennial census. After having discontindeveloped for estimating poverty in small areas (counties and states) Poverty Estimates Program, Bureau of the Census, Department of ued the program in 1987, the Bureau of the Census recently began making such estimates at the request of a large number of Federal The estimates provided are from the Small Area Income and

Because counties undergo economic and demographic changes over poverty rates across counties than data reflected in the 1990 Census. In addition, annual estimates can be used to track changes in poverty rates statistically precise than the decennial census. For 1991 and 1992, Kids inderstood that while such estimates are more current than the decenmodel, caution should be taken when comparing the figures contained Count Data Books provided estimates of children in poverty. Because nial census, annual poverty rates generated using such models are less time that differ from one county to the other, annual estimates using estimates contained in Kids Count were developed using a different statistical models are likely to better represent current differences in in the years between the decennial censuses. However, it should be in this book and those earlier editions.

# Public Assistance Program Participation:

the number of children receiving SSI in the months of December 1993 Security Administration using SDX data report the number of children receiving Supplemental Security Income (SSI). The figures represent The Office of Research, Evaluation and Statistics of the Social and December 1996.

The number of children receiving AFDC and HR are reported by the Bureau of Data Management and Analysis in the Office of

York City WMS basis file. In both cases, the numbers represent children eligible for Food Stamps on December 31, 1993 or December 31, 1996. receiving food stamps in New York City was generated from the New Bureau of Data Management and Analysis. The number of children Food Stamps in Rest-of-State was generated from WIMS data by the System) data. They represent the number eligible on December 31, 1993 or on December 31, 1996. The number of children receiving Temporary and Disability Assistance using (Welfare Management

Estimates of the number of children and youth less than 18 are taken from Woods and Poole population estimates.

#### Low Birth Weight:

grams at birth. The percentage of low birth-weight births is calculated Low brith weight is defined as infants who weigh less than 2,500 by dividing the number of low birth-weight births by the number of live births for which the birth weight is known.

#### Infant Mortality:

live births. In many counties with small populations, an infant death is a cause fluctuations in the infant mortality rate from one year to the next. Therefore, to increase the stability of this indicator, the infant mortality The number of deaths to infants below the age of one. The infant mortality, rate is the number of infant deaths during the year per 1,000 rare event. Occasional tragedies -- fires or automobile crashes -- may rates presented in this report are three-year averages.

#### Early Prenatal Care:

births for which entry into prenatal care is known. This information is trimester (first 3 months) of a pregnancy. The percentage is calculated by dividing the number of births with early care by the number of Early prenatal care is defined as prenatal care during the first extracted from birth certificates.

# L'ECHINICAL INOTIES

### Hospitalization Based Rates:

Data on hospitalizations are collected through the hospital inpatient discharge data system (SPARCS - Statewide Planning and Research Cooperative System). Thus, data are not available on events that did not result in a hospitalization, including cases that were treated in hospital emergency rooms. Each hospitalization receives an ICD-9 code at discharge which indicates the primary reason for the hospitalization. The following are the ICD-9 codes included in the hospitalization-based rates in this publication: asthma hospitalizations primary diagnosis (E493), assault hospitalizations (E900-E968), unintentional injury hospitalizations (E800-E958). The rates are calculated by dividing the number of hospitalizations by an estimate of the number of persons in a specific age group.

### Asthma Hospitalizations:

See hospitalization based rates above.

## Unintentional Injury Hospitalizations:

See hospitalization based rates above.

## Self-Inflicted Injury Hospitalization:

Self-inflicted injury hospitalizations include all hospital discharges with ICD-9 codes (E950-E959). Caution should be used when comparing counties due to small number variations. Also see hospitalization based rates above.

### Sexually Transmitted Disease:

STD incidence rates are based on the number of reported cases of STDS. STDS are underreported by percentages that vary from county to county. Therefore, the New York State and county figures underestimate the overall incidence of these diseases. Because of the differences in the extent of reporting, county comparisons should not be made unless there is reason to believe that rates of underreporting are similar. The rates are

calculated by dividing the number of reported cases of each STD by an estimate of the number of persons aged 15-19 years of age and then multiplying by 100,000. Because in many counties the number of cases of early syphilis and gonorrhea is small, the numbers and rates presented in this report are three-year averages.

# Adolescent Pregnancies (10-14, 15-17, and 15-19):

Pregnancies are the sum of the number of live births, reported induced terminations of pregnancies and reported fetal deaths of all gestations. Although counts of pregnancies are relatively complete, spontaneous fetal deaths under 20 weeks of gestation are underreported. Some pregnancy records are missing age of mother or county of residence. These pregnancies were omitted from the calculations. The adolescent pregnancy rate is calculated by dividing the number of adolescent pregnancies by an estimate of the female population in the appropriate age range.

# Pupil Evaluation Program (PEP) Test Scores:

In the elementary grades, Pupil Evaluation Program (PEP) tests are the primary State measures of student performance. Students take criterion-referenced PEP reading and mathematics tests at the end of grades 3 and 6 and a writing test at the end of grade 5. Students scoring at or above the State Reference Point (SRP) are considered to be proficient in developing the basic skills of reading comprehension, mathematics and writing. Students who score at or above the Quality Point (QP) are considered to have achieved an advanced level of mastery of State content standards in that area. All pupils scoring below the designated SRP are given remediation.

### Limited English Proficiency:

Limited English Proficiency (LEP) students come from a home where a language other than English is spoken and score at or below the 40th percentile on an English language assessment instrument.

# TECHINICAL MOTES

#### Annual Dropout Rate:

In New York State, a dropout is defined as any pupil who left school prior to graduation for any reason except death, between July 1 and June 30, and did not enter another school or program leading to a GED. The dropout rate is equal to the number of dropouts divided by grade 9 through 12 enrollment including the portion of ungraded secondary enrollment that can be attributed to grades 9 through12.

### Regents Endorsed Diplomas:

Regents diplomas are awarded to students who have both passed a series of Regents examinations, demonstrating a certain level of achievement, and have passed the prescribed coursework. The percentage of students receiving Regents diplomas each year is an indicator of attainment for the educational system.

# (238) High School Graduates Intending To Enroll In College:

The rate of college bound New York State high school graduates is based on secondary school reports of the number of seniors who intend to enroll in four-year, and two-year, post-secondary institutions as well as other post-secondary education programs.

# Adolescent Arrests For Violent and Property Crimes:

The number of arrests for violent and property crimes, New York State Uniform Crime Report (UCR) Index Offenses, may be the best indicator of the relative level of criminal activity among youth. Violent index crimes include murder, non-negligent manslaughter, forcible rape, robbery and aggravated assault. Property index crimes include burglary, larceny, and motor vehicle theft. An arrest is counted on each separate occasion a person is taken into custody, notified or cited by a law enforcement official. The arrest is recorded in the jurisdiction where it occurs (this jurisdiction is not necessarily where the crime occurred), and only the most serious offense committed during a crime incident or

multiple crime incidents are recorded. It is important to note that many persons who commit crimes are never arrested, a single arrest can involve multiple crime incidents, and more than one person can be arrested for the same incident. The adolescent arrest rates are calculated by dividing the number of reported adolescent arrests for violent and property index crimes by an estimate of the population of youth in the appropriate age categories.

### Assault Hospitalizations:

See hospitalization based rates above.

#### Youth Drug Arrests:

Youth drug arrests are based on the number of arrests for use, possession or sale of drugs, public narcotic intoxication or DUI, per 10,000 youth ages 10-20 years.

### Driving While Intoxicated:

Youth arrested for driving while intoxicated, per 10,000 youth ages 6-20 years.

## Persons In Need of Supervision:

Persons in Need of Supervision (PINS) are juveniles less than 16 years of age for whom complaints were filed by local probation departments because of non-criminal misconduct such as truancy from school, incorrigibility, ungovernability, or habitual disobedience. Complainants in these cases are generally parents or school officials who are seeking the formal intervention of the family court to control a juvenile's misconduct. PINS cases are recorded in the county in which the PINS complaint is filed. Only the aggregate number of cases is reported by local probation departments to the State, making it impossible to present counts and rates by age categories. Also, local probation departments in Columbia, Erie, and Otsego Counties did not routinely report

# L'ECHINICAL INOTES

counts of opened cases in 1993, 1995, or both years; these counties were excluded from the analysis. The rate for PINS cases is calculated by dividing the number of PINS cases opened by an estimate of the population of juveniles 10 to 15 years of age; the population of juveniles less than 10 years of age was excluded because there are few PINS complaints filed for juveniles in this lower age category.

#### Presence of Parents:

The presence of parents is defined as the percentage of children living with one parent, two parents, or no parents. Children living with no parents were usually living with a relative, although some were in out-of-home care. Data come from the 1990 census.

## Child Abuse and Maltreatment:

Indicated reports of abuse and maltreatment are those reports in which there was sufficient evidence that abuse or maltreatment occurred. For some of the reports received in 1996, that determination had not yet been made. To estimate the rate of indication of reports which were not yet determined, the resolution of undetermined reports from earlier years was applied to these cases.

It should be recognized that indicated reports of child abuse and neglect overestimate the proportion of families with an indicated report of abuse or neglect because of possible additional reports that are indicated for the same family. Estimates using repeat abuse and neglect rates suggest that the rate of overestimation is approximately 17.8%. Applying this rate to the statewide indication rate per 1000 families yields a revised rate per 1000 families of 16.6.

The number of families in 1993 and 1996 is based on the following estimation method: the number of children age 0 to 17 years per families-with-children is calculated for the 1990 census using Tables 140 and 141; estimates for 1993 and 1996 of the number of children age 0 to 17

years (taken from Woods and Poole) are divided by this 1990 childrenper-family ratio to arrive at estimates of the number of families in 1993 and 1996. The indicated reports of abuse and maltreatment are then divided by the estimates of the number of families. Data from the State Central Registry (SCR) were used to identify Child Protective Services (CPS) cases with abuse or neglect reports that were "indicated" between May 1994 and April 1995. A CPS case is defined as a family comprised of one or more children who were named in a report to the SCR as having been abused or neglected. A case becomes "indicated" when CPS determines that there is sufficient evidence to substantiate the reported abuse or neglect. There were 26,965 CPS cases indicated between May 1994 and April 1995. The individuals in these cases were tracked for a period of 21 months to determine if they were named in any subsequent indicated report if any member of the case was involved in another substantiated report of abuse or neglect, either as a perpetrator or a victim, within 21 months: New York State Office of Temporary and Disability Assistance (October 1997). Local District Performance.

(539)

# Subsequent Indicated Reports Of Abuse/Maltreatment:

See Child Abuse and Maltreatment above.

## Children And Youth In Foster Care:

This measure is the total number of children age 17 years and under in the care and custody of the Commissioner of Social Services. The count was taken as of December 31st of each year. The rate of foster care placement is calculated by dividing the total number of children and youth in foster care by an estimate (taken from Woods and Poole) of the total number of children and youth age 17 years and under in New York State for the same year.

#### ERIC Full Text Provided by ERIC

# TECHINICAL MOTES

#### Unemployment:

The unemployment rate is calculated by dividing the number of unemployed by the number of persons aged 16 + years in the labor force (the sum of the employed and unemployed). To be counted as unemployed a person must have actively looked for work within the past four weeks. Thus this rate does not capture discouraged workers (i.e., people who have ceased to look for work after having searched unsuccessfully for a job).

### Medicaid/Self-Pay Births:

Medicaid/self-pay births is defined as the number of births to women with primary financial coverage of Medicaid or self-pay. The percentage of Medicaid/self-pay births is calculated by dividing the number of Medicaid/self-pay births by the number of live births for which the financial coverage is known. This information is extracted from birth certificates.

# UCR Index Crimes Known To The Police:

New York State Uniform Crime Report (UCR) Index Crimes include serious violent and property crimes reported or otherwise known to police. Violent index crimes include murder, non-negligent

manslaughter, rape, robbery, and aggravated assault. Property index crimes include burglary, larceny, and motor vehicle theft. This is not a measure of victimization because some crimes are not reported or otherwise known to police. A reported crime is recorded in the jurisdiction where it occurs, and only the most serious criminal offense that occurred during the commission of the crime is recorded. The crime rate is the number of reported UCR index crimes divided by an estimate of the population of persons of all ages in the general population.

# Firearm-Related Crimes Known To The Police:

New York State Uniform Crime Report (UCR) Index Crimes track whether a firearm was present during the commission of a murder, forcible rape, robbery, or aggravated assault. A reported crime is recorded in the jurisdiction where it occurs, and only the most serious criminal offense that occurred during the commission of the crime is recorded. The fire arm crime rate is the number of reported UCR crimes of murder, forcible rape, robbery, or aggravated assault where a fire arm was present divided by an estimate of the population of persons of all ages in the general population.

#### Appendix Touchstones Life Areas

L		11	
	Touci	Touchstones Life Area: Economic Security	W.
	Goals	Objectives	Measures
	<ol> <li>Children and youth will be raised in families with sufficient economic resources to meet their basic needs.</li> </ol>	<ol> <li>Children will be raised in households with sufficient economic resources to provide food, clothing, shelter and other necessities.</li> </ol>	Availabla for Countias:  Child poverty rate  Public assistance recipiency rate
			Available for State:  Parental employment rate  Wedian income for families with children  Income distribution for families with children
			Not Currondly Available: Percent of families with stable housing
		<ol> <li>Children and youth will receive adequate financial support from absent parents.</li> </ol>	Not Currently Available: ▶ Percent receiving child support
<u>~</u>	Youth will be prepared for their eventual economic self-sufficiency.	<ol> <li>Youth will have skills, attitudes, and competencies to enter college, the workforce, or other meaningful activities.</li> </ol>	Available for Counties:  Dropout rate  Percent of high school graduates entering college Percent of high school students taking SATs
		<ol> <li>Young adults who can work will have opportunities for employment.</li> </ol>	Available for State:  - Unemployment rate for young adults (ages 20-24)
		<ol> <li>Youth seeking summer jobs will have employment opportunities.</li> </ol>	Available for State:  - Unemployment rate for teens (ages 16-19)

otional Health	Measures	Availabla for Counties:  Low birth weight rate  Newborn HIV seroprevalence rate	Available for Counties:  Asthma hospitalization rate (0-14 yrs)  Rate of children & adolescents with early syphilis or gonorrhea (10-14 yrs, 15-19 yrs)  Rate of children and adolescents with tuberculosis (0-14 yrs, 15-19 yrs)  Percent of children screened with high blood lead levels  Rate of hospitalizations due to unintentional injuries among children and youth (0-4 yrs, 5-9 yrs, and 10-19 yrs)  Rate of unintentional injury mortality among children and youth (0-4 yrs, 5-9 yrs, and 10-19 yrs)	Available for Counties:  - Rate of iron deficiency in children (WIC) - Percent of children overweight (WIC) - Percent of children underweight (WIC) - Percent of mothers breastfeeding at hospital discharge and 5 months (WIC)	Available for Rest of State:  Percent of high school students that exercised or participated in a sports activity for at least 20 minutes three or more times in the last week. (YRBS)
Touchstones Life Area: Physical and Emotional Health	Ohjectives	1. Infants will be born healthy.	2. Children and youth will be free from preventable disease and injury.	3. Children and youth will have nutritious diets.	4. Children and youth will be physically fit.
Towell	Goals	<ol> <li>Children and youth will have optimal physical and emotional health.</li> </ol>			

notional Health	Measures	Available for Counties:  Rate of hospitalizations due to self-inflicted injuries among youth (10-19 yrs)  Rate of hospitalizations due to mental illness among children and youth (10-19 yrs)  Rate of suicide mortality among youth (10-19 yrs)  Available for Rest of State:  Percent of high school students who attempted suicide; and of these, percent who required treatment (Youth Risk Behavior Survey)	Available for Counties:  Adolescent pregnancy rate (10-14, 15-17 yrs, 18-19 yrs, & 15-19 yrs)  Youth Alcohol Consequences Index (OASAS)  Youth Substance Use Consequences Index (OASAS)  Available for State and/or Rest of State:  Prevalence of tobacco, alcohol and drug use and abuse in adolescents from Youth Risk Behavior Survey and/or OASAS Statewide Youth Survey  Percent of high school students that are sexually active (YRBS)  Prevalence of use of contraceptives among high school students (YRBS)	180 180
Touchstones Life Area: Physical and Emotional Health	Objectives	5. Children and youth will be emotionally healthy.	6. Children and youth will be free from health risk behaviors (e.g., smoking, drinking, substance abuse, unsafe sexual activity).	
Touch	Goals	ď		488

ional Health	Measures	Available for Counties:  Asthma hospitalization rate (0-4 yrs)  Percentage of births with early (1st trimester) prenatal care  Percent of population 9 mo. thru 5 yrs of age, screened for high blood lead levels  Available for State:  Percent of 2 yr olds fully immunized  Percent of 2 yr olds fully immunized  without health insurance	Availabla for Counties:  SSI case rate (ages 0-19)	Hos Currently Availabla
s Life Area: Physical and Emotional Health	Objectives	<ol> <li>Children and youth will have access to timely and appropriate preventive and primary health care.</li> </ol>	8. Children with special health care needs <sup>1</sup> will experience an optimal quality of life.	9. Children and youth with service needs due to mental illness, developmental disabilities and/or alcohol and substance abuse problems, will have access to timely and appropriate services.
Touchstones Life	Goals			

<sup>&</sup>lt;sup>1</sup>Children with special health care needs are those children (0-21) years who have or are suspected of having a serious or chronic physical, developmental, behavioral, or emotional condition and who also require health and related services of a type or amount beyond that required by children generally.

FR			
ĬC-	3	Touchstones Life Area: Education	
	Goals	Objectives	Measures
4.	Children will leave school prepared to live, learn and work in a community as contributing members of society	1. Children will come to school ready to learn.	Not Currently Available:  Number of students whose parents/caregivers read to them on a regular basis
		2. Students will meet or exceed high standards for academic performance and demonstrate knowledge and skills required for lifelong learning and self-sufficiency in a dynamic world.	Aveilable for Counties:  Percent scoring above minimum and mastery levels in grade 3 and 6 Reading (PEP)  Percent of students scoring above minimum and mastery levels in Grade 3 and 6 Math (PEP)  Percent scoring at passing and mastery levels in Regents English, Seq. Math I, Seq. Math III, Global Studies and U.S. History and Government  Mean SAT score (verbal, math and composite)  Most Currently Available:  Number of students developing a career
		3. Students will be educated in a safe, supportive drug-free and nurturing environment.	Available for Counties:  Available for Counties:  Percent of school buildings meeting safety (fire and health) requirements  Suspension rate  Attendance rate
			Available for Rest of State:  Percent of high school students offered an illegal substance (YRBS)  Percent of high school students carrying a weapon on school property (YRBS)

	Measures	Percent of high school students threatened or injured with a weapon on school property (YRBS) Percent of high school students in a physical fight on school property (YRBS)	Not Currantly Availabla:  Percent of parents involved in supporting improved student achievement.  Violence indicator (to be developed in school report card)	Available for Counties:  Percent of high school graduates earning a Regents Diploma Percent of high school graduates entering college Drop-out rate	Available for State:  Percent of students in GED-approved high school equivalency programs passing the GED test  Percent of persons without a high school diploma who earned the GED credential	
Touchstones Life Area: Education	Objectives			4. Students will stay in school until successful completion.		
	Goals					

_			
	RĬC	Touchstones Life Area: Citizenship	
	Goals	Objectives	Measures
က်	Children and youth will demonstrate good citizenship as law-abiding, contributing members of their families, schools and communities.	<ol> <li>Children and youth will assume personal responsibility for their behavior.</li> </ol>	Available for Counties:  Adolescent violent arrest rates (index part I) (11-12 yrs, 13-15 yrs, 16-18 yrs)  PINS (13-15)  Adolescent property arrest rates (11-12 yrs, 13-15 yrs, 16-18 yrs)  Assault hospitalization rate (10-19 yrs)  Homicide mortality rate (10-19 yrs)  Available for Counties (excluding NVC):
			P Youth in motor vehicle accidents charged with AI or DWI  Available for State and/or Rest of State:  Lifestyle/Alcohol, Tobacco, and Other Drug Use (ATOD) utilization from Youth Risk Behavior Survey and OASAS statewide youth survey
		2. Youth will demonstrate ethical behavior and civic values.	Hos Currently Available
		<ol> <li>Children and youth will understand and respect people who are different from themselves.</li> </ol>	Not Currently Available
		<ol> <li>Children and youth will participate in family and community activities.</li> </ol>	Hot Currently Available
		5. Children and youth will have positive peer interactions.	Not Currently Available
		<ol> <li>Children and youth will make constructive use of leisure time.</li> </ol>	Not Currently Available
		7. Youth will delay becoming parents until adulthood.	Available for Counties:  Adolescent pregnancy rate (10-14 yrs, 15-17 yrs, 18-19 yrs and 15-19 yrs)
i	900	8. Children and youth will refrain from violence and other illegal behaviors.	[See Measures from Objective 1]

	Touchstones Life Area: Family	
Goals	Objectives	Measures
Families will provide children with safe, stable and nurturing environments.	<ol> <li>Parents/caregivers will provide children with a stable family relationship.</li> </ol>	Available for Counties:  • Foster care out-of-home placement rate by age 0-5, 6-12, 13-17  • Out-of-home placement rate
	<ol><li>Parents/caregivers will possess and practice adequate child rearing skills.</li></ol>	Not Currently Available
	3. Parents/caregivers will be literate.	Available for Counties:  Nother's education from birth certificates (% births to mom with less than 12 years of education and 20 years of age or older)
	4. Parents/caregivers will be positively involved in their children's learning.	Not Currently Available
	<ol> <li>Parents/caregivers will have the knowledge and ability to access support services for their children.</li> </ol>	Not Currently Available
	<ol> <li>Parents/caregivers will provide their children with households free from physical and emotional abuse, neglect and domestic violence.</li> </ol>	Available for Counties:  Indicated cases of child abuse/neglect (3-year average)  Percent of repeat abuse/neglect
	7. Parents/caregivers will provide their children with households free from alcohol and other substance abuse.	Not Currently Available

Touchstones/Kids Count Data Book Recipient:

The New York State Council on Children and Families is pleased to have produced the 1998 edition of the New York State Touchstones/Kids Count Data Book. The Annie E. Casey Foundation funds the Kids Count project through national, state-by-state and state-level efforts in order to track the status of children in the United States. In order to ensure quality improvement of the New York edition, this survey intends to evaluate the usefulness of this resource. In addition, your feedback will help define the needs and uses for future information services, e.g., a New York State web-site clearinghouse of health and well-being indicators.

Please take the time to complete this survey. Supplying your name and address will ensure you remain on the mailing list or are added to the mailing list. Your name will remain confidential. Please complete the questionnaire by *April 30, 1999*, and return by mail or fax to:

New York State Council on Children and Families
5 Empire State Plaza, Suite 2810
Albany, NY 12223 or
Fax: (518) 473-2570

Thank you for your valuable feedback and the Council hopes this edition of the New York State
Touchstones/Kids Count Data Book serves as an effective resource.

## Instructions

Each question will specify whether one option is to be selected or if multiple options may be applicable. Please circle your answers for questions 1 through 4 and check the appropriates boxes in question 5.

1. How will you utilize the Kids Count Data Book and if applicable, is the Data Book an effective tool? For each utilization, please circle "y" for yes, if you intend to use the Data Book for this task or "n" for no, if utilization is not applicable to your tasks. If yes, please circle the number that corresponds with your perceived effectiveness of the Data Book for each of the respective utilizations.

	Utilization	Yes	No	Very Ineffective	Minimally Effective	Adequately Effective	Very Effective
1.a.	To understand statewide conditions and trends	У	N	1	2	3	4
1.b.	To understand individual counties conditions and trends	У	2	1	2	3	4
1.c.	To provide a common reference	У	N	1	2	3	4
1.d.	To compare counties	У	N	1	2	3	4
1.e.	To compare county to state	У	N	1	2	3	4
1.f.	To prepare reports	У	N	1	2	3	4
1.g.	To prepare grant applications	У	N	1	2	3	4
1.h.	To evaluate the performance of a program	У	Ν	1	2	3	4
1.i.	To design a new program	У	N	1	2	3	4
1.j.	Other(please specify)			1	2	3	4

(OVER...)

2. How helpful/useful was the data in the Data Book?

Please circle the number which corresponds with the perceived usefulness of the data in the Data Book for

each of the respective data characteristics.

	Data characteristics	Serious Weakness	Minimal Weakness	Adequate	Notable Strength
2.a.	Data was current	1	2	3	4
2.b.	Data was easy to interpret	1	2	3	4
2.c.	Pertinent data was included	1	2	3	4
2.d.	Other (please specify)	1	2	3	4

3. What other data resources do you routinely use?

Please circle "y" for yes if data resource is routinely used or "n" for no if data resource is not routinely used.

	Resource	Yes	No		Resource	Yes	No
3.a.	Internet	У	N	3.e.	State publications	У	N
3.b.	Library	У	N	3.f.	Federal publications	У	N
3.c.	Data generated in own department	У	2	3.g.	Journals/magazines	У	N
3.d.	Data generated in own agency	У	N	3.h.	Other (please specify)		

4. Do you have access to the Internet as a data resource?

Please circle "y" for yes or "n" for no for all of the responses as they relate to your Internet access.

4.a.	I have access at my workstation.	У	2	4.d.	I utilize library access.	У	N
4.b.	I have access within my office.	У	7	4.e.	I have access at home.	У	N
4.c.	I have access within my department.	У	2	4.f.	I do not have Internet access.	No Ac	cess
